STANLEY

SPECIFICATIONS INSTRUCTIONS

TROUBLESHOOTING

⚠ NOTE: Do not disassemble the motor housing. This motor has NO repairable internal parts and disassembling may cause an oil leak or dangerous electrical wiring issues.

Item	Description
1	Switch box
2	Check valve adapter
3	Impeller
4	Pump base
5	Screen

Product Specifications

Power Supply Required	115V, 60 Hz
Water Temperature Range	Max. 77° F (25° C)
Operation position	Vertical
Individual Branch Circuit Required	10 Amp minimum
Operating water depth beginning minimum	Approximately 1½ in.
Ending water level maximum	Approximately ¼ in.
Discharge connection	1 in. garden hose thread or ¾ in. garden hose w/ included adapter
Discharge hose diameter	¾ in. minimum ID
Discharge hose length	50 ft. maximum recommended hose length
Motor	Permanent Split Capacitor, with thermal overload protection
Power Cord	SJTW, 18AWG/3C, 10ft.

Construction

Motor Housing	Flame retardant nylon
Volute (intake screen)	Reinforced nylon
Impeller	Glass reinforced thermoplastic

Performance

Model	HP	GPM of Water @ Total Feet of Head with ¾ in. hose					Maximum Lift
		5 ft.	10 ft.	15 ft.	20 ft.	25 ft.	
ST-255P	¼	36	32.5	28	24	18	33.4 ft.

FOR ALL WARRANTY AND SERVICE RELATED ISSUES/QUESTIONS DO NOT RETURN YOUR UNIT TO THE STORE OR DEALER WHERE THE ITEM WAS PURCHASED. FOR SERVICE PLEASE CALL THE STANLEY® CUSTOMER SERVICE HOTLINE AT 1-877-684-8912. WE WILL BE HAPPY TO HANDLE YOUR WARRANTY ISSUE OR DIRECT YOU TO THE NEAREST "AUTHORIZED SERVICE CENTER."

Warning

Attempting to assemble, operating the product, please call customer service through Friday.

approximately 1½ in., and will not start. Place the pump in the lowest water level and turn the pump on. Do not use with flammable liquids such as oil, gasoline, kerosene, or other volatile vapors. Using this pump with flammable liquids can cause serious personal injury and/or property damage.

Before installing, inspecting, and operating the pump, ensure the pump is dry.

The pump may become HOT and should be handled with care.

The pump has NO repairable internal parts and disassembling may cause electrical wiring issues.

The pump is not intended for use in swimming pools or in salt water. It has not been tested or approved for use in swimming pools or in salt water.

The pump is made of high-strength, corrosion-resistant materials. It will provide long life when properly installed, maintained and used. However, electrical power to the pump, dirt or blockage by ice or debris may cause the pump to stop or bring about additional water damage. To minimize the potential for water pump failure, please carefully read the manual and follow the instructions for proper pump operation and remedies or call 1-877-684-8912.

The pump has not been tested or approved for use in swimming pools or in salt water. It is also not engineered to be run continuously as a "fountain" or "water feature." Because this pump has an oil-filled motor, it should NOT be used in water applications. It can drain or damage concrete, masonry, swimming pool covers, etc. It has not been tested or approved for use in swimming pools or in salt water.

For safety, the pump motor has an automatic resetting thermal protector that will shut off the pump if it becomes too hot. Overuse of this feature will damage the pump and void the warranty.

When the thermal protector detects that the pump has cooled to a safe temperature, the pump will restart. If the pump is plugged in, it may restart.

Parameter Settings

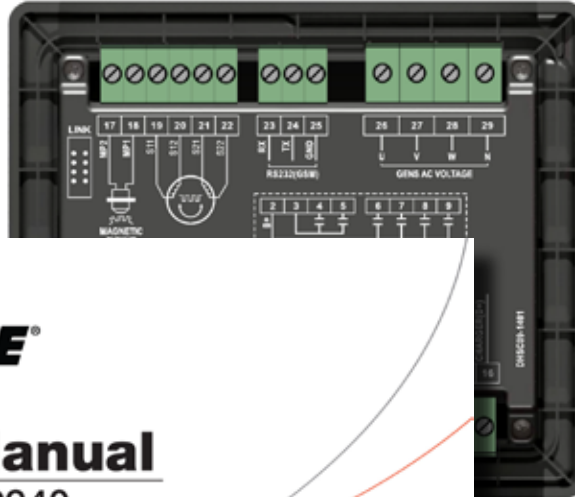

Start the controller, then press enter into the parameters setting menu, see fig 1 below:

HUDSON MOTORS Owners' Manual

REPLACING THE OIL

Recommended oil: SAE 15W/30
Oil grade: API standard Model SJ or higher Volume: 32FL

When the oil has been added, tighten the oil dipstick, put the vented cover plate back in place, and tighten the knob.

REPLACING THE AIR FILTER

A dirty air filter may prevent air from flowing into the combustion. In order to prevent the failure of the combustion, please maintain the air filter regularly. If the generator is being used in a dusty environment, it should be maintained frequently.

1. Stopper the knob.
2. Remove the air filter cover plate.
3. Remove covers.
4. Remove the air filter cover plate.
5. Remove the front cleaner element.

Clean the front cleaner element with a cleaning solvent and blow it dry. Strip a few strips of old paper from the element and powder off excess oil. The front cleaner element should be wet, but there should not be oil dripping.

Be sure not to touch the front cleaner element heavily to avoid damage.

Put the front cleaner element back into the air cleaner. Make sure that the bottom of the front cleaner element is in close contact with all elements. There should be no gap between them. Do not start the engine before the air cleaner is assembled, because it will generate excessive heat to your engine next to the cylinder.

**THE
LOG
BOOK
.COM**

The main logo features the text 'THE LOG BOOK .COM' in a bold, black, sans-serif font. The word 'LOG' is the largest and most prominent. A stylized planet with a prominent ring system is positioned behind the letters 'O', 'O', and 'K' of 'LOG BOOK'. The planet and its ring are rendered in black and white, with the ring curving around the planet.

**THE
LOG
BOOK
.COM**

This version of the logo is smaller and features a rocket ship instead of a planet. The rocket is positioned behind the letters 'O', 'O', and 'K' of 'LOG BOOK', pointing upwards and to the right.

**THE
LOG
BOOK
.COM**

This version of the logo is identical to the one on the left, featuring a rocket ship behind the letters 'O', 'O', and 'K' of 'LOG BOOK'.

**THE
LOG
BOOK
.COM**

This version of the logo features a USB drive instead of a planet or rocket. The USB drive is positioned behind the letters 'O', 'O', and 'K' of 'LOG BOOK', angled upwards and to the right.

**THE
LOG
BOOK
.COM**

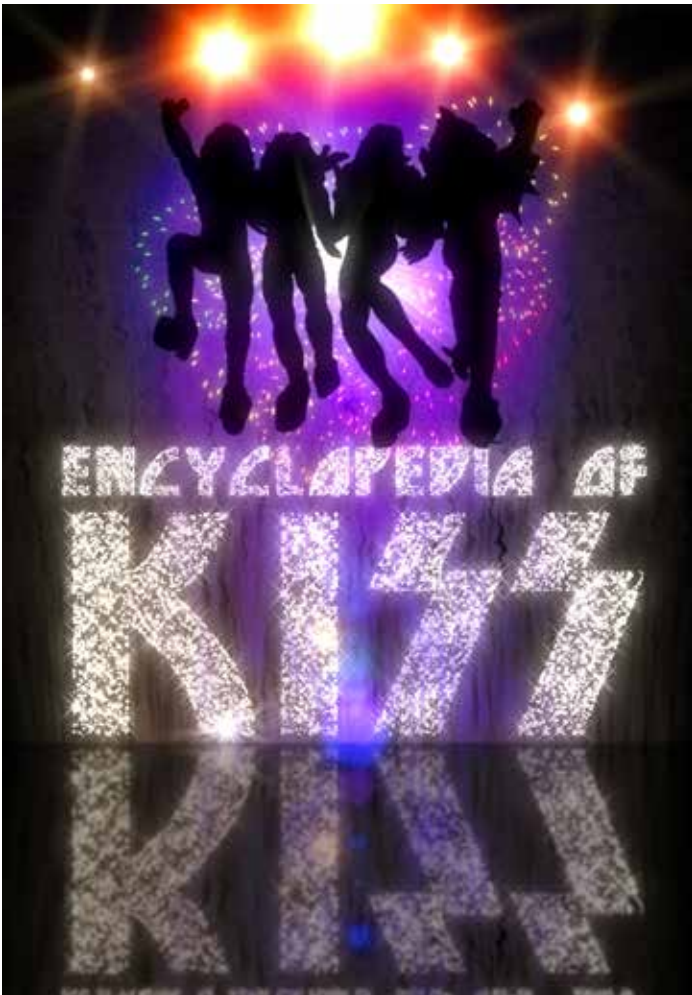

This version of the logo is identical to the one on the left, featuring a rocket ship behind the letters 'O', 'O', and 'K' of 'LOG BOOK'.

ESA TEST DRIVES NEW IXV SPACEPLANE

The European Space Agency conducted a successful test launch of its Intermediate Experimental Vehicle on February 11th, launching the mini-spaceplane atop a Vega rocket from ESA's Kourou, French Guiana spaceport. The short-lived IXV followed a parabolic arc, reaching a maximum altitude of 412 kilometers before returning to Earth under parachutes, splashing down in the Pacific Ocean in a target area near the Galapagos Islands. Later test flights will try to validate the intended return method, using parafoil-style parachutes, a method considered

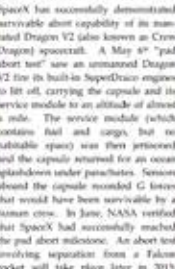

and tested early in NASA's Gemini program in the 1960s) to bring the trochus IXV down safely on dry land. IXV is part of ESA's program to develop its own reusable space vehicle able to be returned NASA Space Shuttle, leading to a manned spaceflight capability for Europe's space agency. The IXV flight was declared a success, and ESA is already planning a follow-up IXV test launch to take place sometime in 2017 or 2020, this time testing the vehicle's ability for a guided return to land.

NEWS UPDATES | NEWS UPDATES

DRAGON V2 SURVIVES PAD ABORT TEST

SpaceX has successfully demonstrated survivable abort capability of its manned Dragon V2 (also known as Crew Dragon) spacecraft. A May 10th "pad abort test" saw an unmanned Dragon V2 fire its built-in SuperDraco engines to lift off, carrying the capsule and its service module to an altitude of almost a mile. The service module (which contains fuel and cargo, but no habitable space) was then jettisoned and the capsule returned for an ocean splashdown under parachutes. Sensors aboard the capsule recorded G forces that would have been survivable by a human crew. In June, NASA verified that SpaceX had successfully matched the pad abort milestone. An abort test involving separation from a Falcon rocket will take place later in 2015. SpaceX hopes to fly its first crewed Dragon V2 to the ISS in 2017.

All but spent, the SuperDraco engines shut down, allowing the combined command/service module to coast for a few seconds before parachutes deploy.

OSPHOR DOT HOSTILE

For your old consoles? We ogie the latest homebrew releases.

Race
 Written by Ivan Machado
 Race was the first video game to feature graphic violence (bullet-trick figures with their own eyes) and an describing those stick (actioning the violence). In subject of an episode of humans living up to the most violent video games, the air, Death Race is no survival horror and military (the leaning on discrete logic). Death Race can't even be played on this console. It's a perfect fit for the of Magnusson's undervalued title had unduly limited screen play mandatory. It's not to be on the Odyssey's all

Dungeon Stalker
 A Maze Game
 Atari 7800 / programmed by Steve Engsthardt
 Based on the best-known classic, Night Stalker (which was also translated in vast-scaled-down form to the Atari 2600 back in the day), Dungeon Stalker puts you back in the maze with bats, bats, and bullets...but never enough bullets. You have limited ammo (this is one of a handful of games from the 80s that I can think of where ammo is a limited commodity), and if you run out, it becomes a game of just evading everything until the next ammo drop randomly appears (if not in your way, then very near your way).

SIR CHRISTOPHER LEE 1922-2015

A devoted World War II veteran who opted never to speak about his time working in British intelligence, Christopher Lee didn't embark on a full-time acting career until afterward, where he emerged with the counter-problem solution of being screen back one like in parenthesis. Though initially told his height was a liability, Lee was a role for which it wasn't: that of the monster created by Dr. Frankenstein (as Hammer Studios). Hammer later cast him as Count Dracula in a series of movies, often opposite Peter Cushing's Van Helsing. The movie earned little in the way of Academy, though Lee and Cushing became lifelong friends. In the 1970s, Lee moved to America to get away from being typecast in British horror movies. It didn't bring in work, but it did lead to a career in genre movies in the Land Of The Big Screen and the Star Wars prequel trilogy. He also recorded heavy metal albums, including a selection of metal Christmas carol covers.

IN MEMORIAM

YVONNE CRAIG 1930-2015

Working on a career as a baller dancer, Yvonne Craig was considered star in that field when backstage drama led to her return to the U.S., where she expected to resume her career. Instead, Hollywood found her, and she became a star on TV (Cherry Ames, I Love Gilda, The Man From Nowhere) and on the big screen (Jaguar, The Iron Horse, Kismet). It happened at the World's Fair and Mary Pickford in the late 1950s and early 60s. As the popular Batman TV show's third season with declining ratings, she was added to the cast as Batgirl (aka, Commissioner Gordon's daughter) and while she proved to be a popular addition, the show's career by the end of that season. She also starred in the 1960s War Time episode When Gosh Derring, The Most American York, Kismet, and The Six Million Dollar Man. Her Hollywood heyday, she went into business for a producer and then ultimately branching out into her first film on August 17th.
